

SESSION 02 WORKSHEET

Họ Tên Sinh Viên: Đoàn Thị Quỳnh Trang MSSV: 23070537

Ngày Làm Bài: 27/1/2026 Lớp: INS3064-02

A. Multiple Choice

1. Which variable name is correct?

Answer: B) \$_name

Giải thích : Biến PHP bắt đầu bằng \$ không được bắt đầu bằng số, không dùng dấu -, không được thiếu \$

2. 5 == "5" returns?

Answer: A) true

Giải thích : == chỉ so sánh giá trị, PHP tự ép kiểu (string → number)

3. 5 === "5" returns?

Answer: B) false

Giải thích : === so sánh giá trị + kiểu dữ liệu

- 5 → integer
- "5" → string
- → khác kiểu → false

B. Essay Questions

1. Write code to check if a number is even

```
<?php
```

```
$number = 10;
```

```
if ($number % 2 == 0) {
```

```
    echo "Even number";
```

```
} else {
```

```
    echo "Odd number";
```

```
}
```

```
?>
```

2. Write a loop to print numbers from 10 to 1 (countdown)

```
<?php
for ($i = 10; $i >= 1; $i--) {
    echo $i . " ";
}
?>
```

C. Practical Exercises

Exercise 1: BMI Calculator

```
1 <?php
2 // Declare variables
3 $height = 1.7; // meters
4 $weight = 65; // kilograms
5
6 // Calculate BMI
7 $bmi = $weight / ($height * $height);
8
9 // Assessment
10 if ($bmi < 18.5) {
11     $assessment = "Underweight";
12 } elseif ($bmi < 25) {
13     $assessment = "Normal";
14 } elseif ($bmi < 30) {
15     $assessment = "Overweight";
16 } else {
17     $assessment = "Obese";
18 }
19
20 // Output result
21 echo "Height: $height m<br>";
22 echo "Weight: $weight kg<br>";
23 echo "BMI: " . round($bmi, 2) . "<br>";
24 echo "Assessment: $assessment";
25 ?>
26
```

Height: 1.7 m
 Weight: 65 kg
 BMI: 22.49
 Assessment: Normal

Exercise 2: Multiplication Table (2–9)

The screenshot shows a code editor with the following PHP code for a multiplication table:

```
3 <head>
6 <style>
26 </style>
27 </head>
28 <body>
30 <table>
31 <caption>Multiplication Table (2 to 9)</caption>
32 <tr>
33 <th>x</th>
34 <?php
35 // Header row
36 for ($i = 2; $i <= 9; $i++) {
37     echo "<th>$i</th>";
38 }
39 ?>
40 </tr>
41
42 <?php
43 // Nested loops
44 for ($row = 1; $row <= 9; $row++) {
45     echo "<tr>";
46     echo "<th>$row</th>";
47     for ($col = 2; $col <= 9; $col++) {
48         echo "<td>" . ($col * $row) . "</td>";
49     }
50     echo "</tr>";
51 }
52 ?>
53 </table>
54
55 </body>
56 </html>
57
```

Multiplication Table (2 to 9)

x	2	3	4	5	6	7	8	9
1	2	3	4	5	6	7	8	9
2	4	6	8	10	12	14	16	18
3	6	9	12	15	18	21	24	27
4	8	12	16	20	24	28	32	36
5	10	15	20	25	30	35	40	45
6	12	18	24	30	36	42	48	54
7	14	21	28	35	42	49	56	63
8	16	24	32	40	48	56	64	72
9	18	27	36	45	54	63	72	81

Exercise 3: Prime Numbers (Bonus)

The screenshot shows the Visual Studio Code editor interface. The Explorer sidebar on the left displays a project structure with folders 'SESSION01' and 'SESSION02'. Under 'SESSION02', there are subfolders 'EX1' through 'EX4', 'path1' through 'path4', a 'Practices' folder, and several PHP files including 'FindPrimeNumbers.php', 'PrintMultiplication.php', and 'Student List.php'. The 'FindPrimeNumbers.php' file is selected and its content is displayed in the main editor area. The code is a PHP script that defines an 'isPrime' function and uses it to print all prime numbers from 1 to 100.

```
1 <?php
2 // Function to check prime number
3 function isPrime($n) {
4     if ($n <= 1) {
5         return false;
6     }
7     for ($i = 2; $i <= sqrt($n); $i++) {
8         if ($n % $i == 0) {
9             return false;
10        }
11    }
12    return true;
13 }
14
15 // Print prime numbers from 1 to 100
16 echo "Prime numbers from 1 to 100:<br>";
17
18 for ($i = 1; $i <= 100; $i++) {
19     if (isPrime($i)) {
20         echo $i . " ";
21     }
22 }
23 ?>
24
```

The screenshot shows a web browser window with the address bar displaying the URL 'localhost/ins3064/INS3064_DoanThiQuynhTrang.github.io/SESSION02/Practices/FindPrimeNumbers.php'. The page content displays the output of the PHP script, which is a list of prime numbers from 1 to 100.

Prime numbers from 1 to 100:
2 3 5 7 11 13 17 19 23 29 31 37 41 43 47 53 59 61 67 71 73 79 83 89 97
